Part 1

Descriptive Table (GXP Audit):

Audit. Status	Frequency	Percentage	Valid Percentage
Closed	19	19.8%	19.8%
Completed	4	4.2%	4.2%
In Progress	18	18.8%	18.8%

Cancelled	4	4.2%	4.2%
Total	96	100.0%	100.0%

Audit Status Count (GXP)

Audit Status Percentage (GXP)

Discussion:

The descriptive analysis depicts the status report of the audit conducted for guideline for 'Good working Practice' pertaining to various branches of the pharmaceutical industry in 2017. It shows how many audits are completed, closed, in progress, scheduled, pending, not in scope and cancelled for the year 2017. However, the data does not provide clarity on difference between audits that are completed and closed. As per the analysis, most of the audits (27.10%) are not in scope. The percentage of closed projects seems good at 19.80%. However, 14.60% of the audits are still pending. Only 4.2% of the audits are completed. 11.50% of the audits are scheduled and 4.2% of the audits are cancelled. Notes are not provided for any audits. At least the notes for the cancellation of the projects would have made sense.

Descriptive Table:

Discussion:

The descriptive analysis depicts the status report of the audit conducted for Computerized System Quality Assurance in 2017. It shows how many audits are completed and closed for the year 2017. The data shows that 75% of the audits are completed and 25% of the audits are closed. However, some data like TW report number, date of intake, audit start date, audit end date, date of audit debrief are missing.

The variable depicts the time taken between sending of the questions and receiving of the questions. It does not apply to all the audits because questions are not sent in all the audits. Also, the dates of questions sent and received are not available for all the audits.

I would not recommend merging the two worksheets "2017 Gxp Audits" and "2017 CSQA" Audits. Firstly, both the data are of two different audits, one data represents the good working practice audit and the other data represents the Computerized system Quality Assurance audit, hence it is better to analyze the data separately. The Data of GXP Audit is big and the data of CSQA audit is smaller in size. Therefore, it will be difficult to figure out the result when the data are merged.
