- 1) Visualization is the graphical display of information...
- 2) Graphics act as a cognitive aid

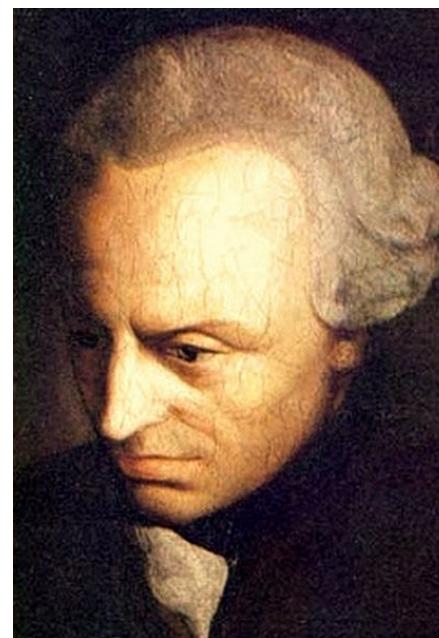

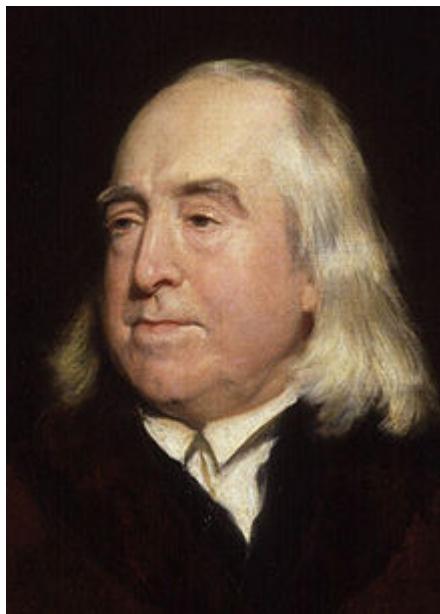

**Graphics take the EFFORT out of  
imagining the information.**

The goal of ethical visualizations is to help with cognitive strain, but to stay true to the data and analysis.

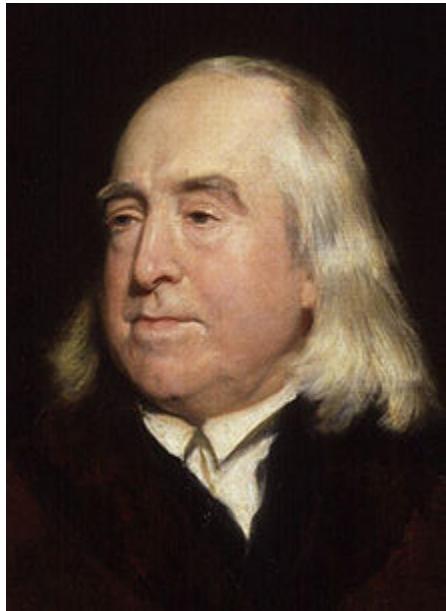

**"what I am doing when I create the graphic... Is to take the effort out of your brain and put it on paper"**

**“The goal is not to over simplify the information. We *should* present complexity to readers in an engaging way, people will care.”**

There are two main families of ethical reasoning:

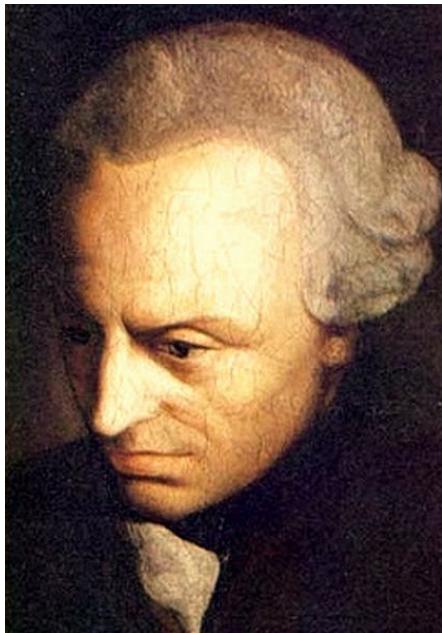

# Consequentialism

“Nature has placed mankind under the governance of two sovereign masters, pain and pleasure. It is for them alone to point out what we ought to do, as well as to determine what we shall do.”

Jeremy Bentham , *Principles of Morals & Legislation*

# Deontology

“Act only according to that maxim whereby you can at the same time will that it should become a universal law without contradiction.”

Immanuel Kant, *Grounding for the Metaphysics of Morals*

Modern biomedical ethics  
recognizes four guiding principles:

Autonomy

Nonmaleficence

Beneficence

Justice

The same principles can be applied to visualization!

# What a Good Visualization Should Be

1. Truthful
2. Functional
3. Beautiful
4. Insightful
5. Enlightening

# Ethical Correlates

Alberto Cairo, Professor of the Professional Practice, University of Miami

1. Truthful | be honest, avoid lying to ourselves and we avoid lying to others
2. Functional | be clear, don't oversimplify
3. Beautiful | attention to relevant info
4. Insightful | reveal hidden truths
5. Enlightening | attention to relevant info

# Visual.ly's corporate code of ethics is instructive:

"As an organization that both practices and recognizes quality data-journalism, Visual.ly subscribes to the code of ethics of the Society of Professional Journalists and agrees to abide by all of its principles.

We also agree to the following principles to support data analysis and visualization:

Data will be accurate and verifiable - Visual.ly will not "lie with statistics."

Proper Sourcing & Attribution - Visual.ly will always give credit where due and will do its own reporting.

Best Practices in Visual Representation - Visual.ly will not exploit idiosyncrasies of the human visual system to exaggerate or misrepresent data.

Most succinctly stated, Visual.ly's policy is one that encompasses accuracy, honesty, and transparency."

Marian Dörk, et al., identify four guiding principles:

Disclosure

Plurality

Contingency

Empowerment

# An attempt at distillation:

Our goal in visualizing data is to communicate information to a viewer.

We must strive to do so as accurately and honestly as possible...

... and avoid design decisions that confuse or mislead our viewer.

“A good visualization  
should tell a story”

“The data should tell the story”

# Simplification

# Clarification

# Simplification

Contextual Granularity:  
Going Deeper into Data

**"The purpose of visualization is insight,  
not pictures."**

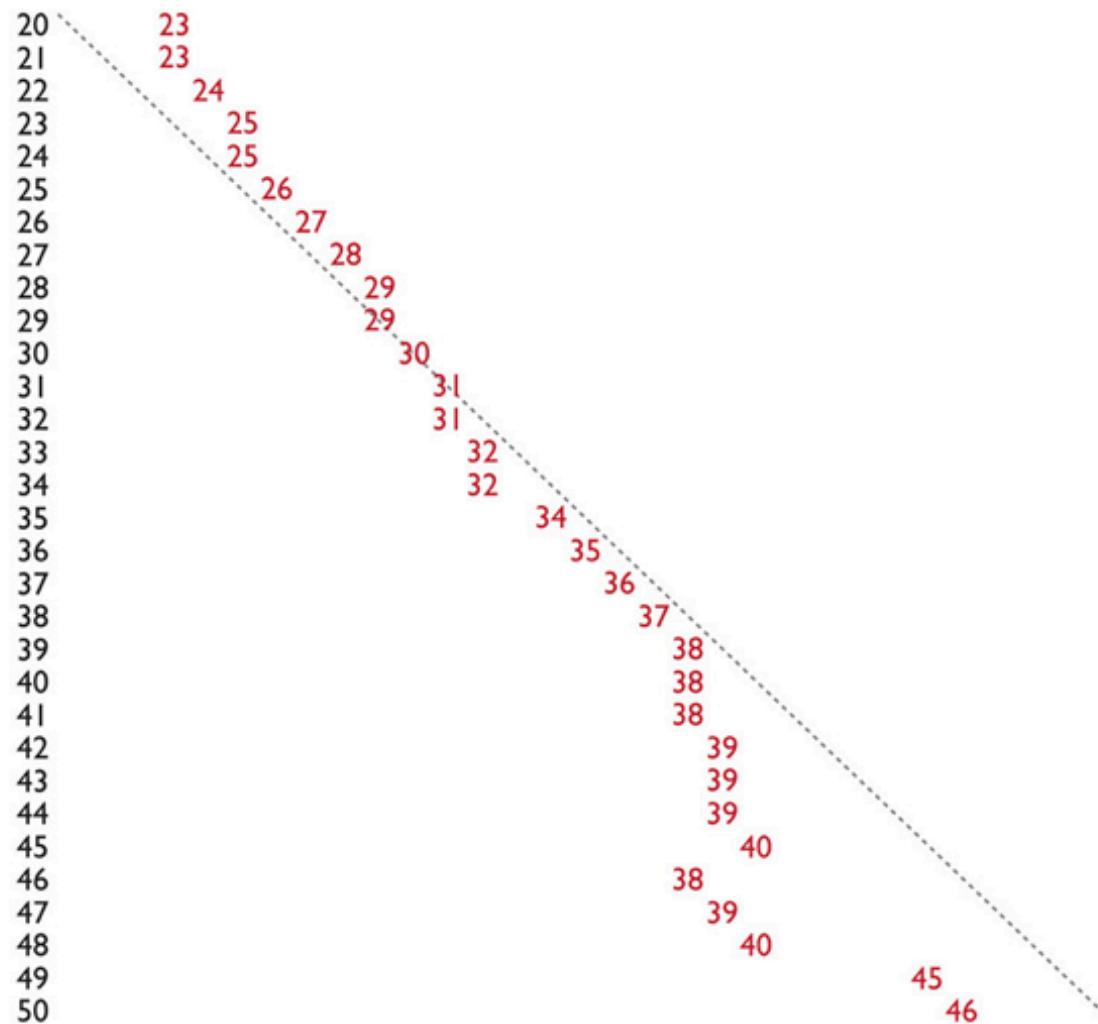

Lie Factor = Size of effect  
shown in the graphic / Size  
of effect in data

**“Charts, graphs, maps, and  
diagrams don’t lie. People who  
design graphics do...”**

**A graphic can *mislead* though.”**

GALLUP®

# Gallup Abortion Poll: AP

## Strong shift in opinion on abortion

A new poll found 51 percent of Americans identify themselves as "pro-life" on the issue of abortion and 42 percent as "pro-choice." It's the first time since 1995 that a majority of U.S. adults have identified themselves as pro-life.

FiveThirtyEight used data from the Global Database of

## Kidnapping rate per 100,000 people, 1982-present

stories about kidnappings, to create both graphics.

## Kidnappings in Nigeria, 1982-present

The problem: their unit of analysis was “media report in Nigeria about kidnapping”, not “kidnapping”.

Many things could affect how many articles there were about kidnapping in a given time period...

... only one of which is the real item of interest for the map (actual kidnappings)!

“The article repeatedly refers to the number and location of kidnappings. But the Global Database of Events, Language and Tone (GDELT) — the data source for the article — is a repository of media reports, not discrete events. As such, we should only have referred to “media reports of kidnappings,” not kidnappings.”

“The animated map also incorrectly locates some reported kidnappings. If the location of a reported kidnapping isn’t in a media report, GDELT defaults the location to the center of Nigeria. So that part of the country is overrepresented in the animated map.”

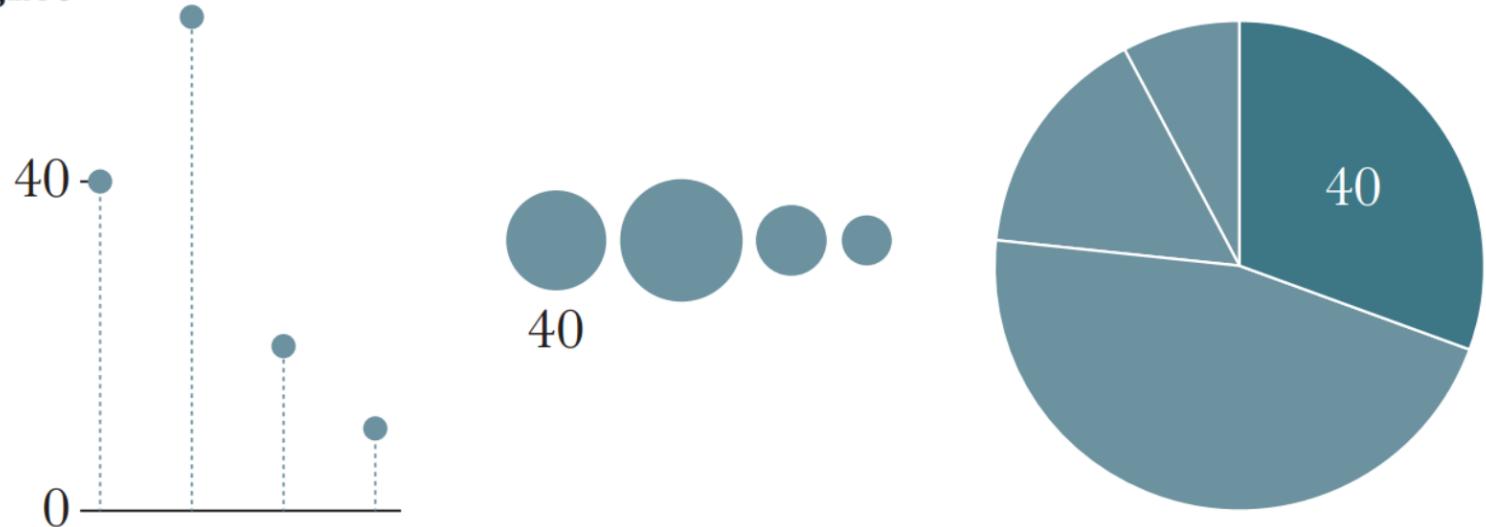

“This piece did not meet FiveThirtyEight’s standards for publication. We apologize for the mistakes. We will do better. The original article follows below.”

# Lies in Area

Symbolically Speaking

# A major part of the problem...

**Figure 3**

Try to estimate the values represented on each chart based on the only value shown. You can probably do this quite well on the dot plot, but not on the bubble chart or the pie chart. The values are 40, 60, 20 and 10.

# OPINION

## Obama's Divided Nation

ama presides over a more divided America than any time in 50 years. That was riven by racial lines gathered in 2008 to elect its president. That president has four years dividing the basis of economy. The campaign revealed no evidence that Mr. Obama will close the chasm he has created between his voters and those he attacked and vilified.

It may be true that Mitt Romney failed to respond

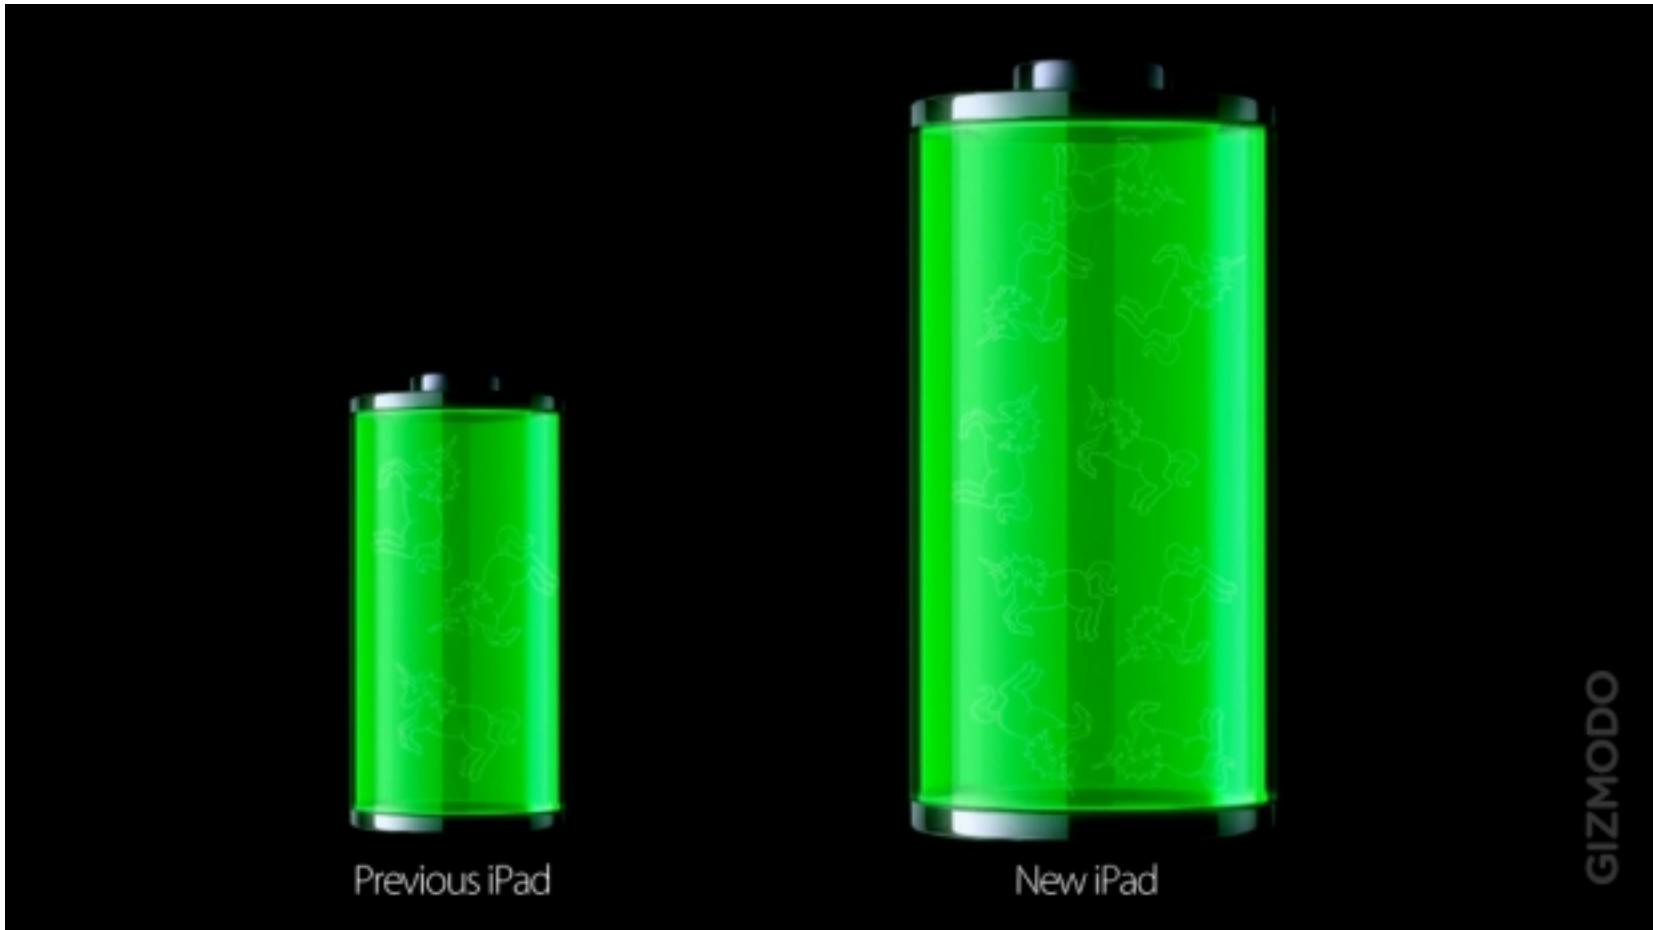

drawn attention to what hap-

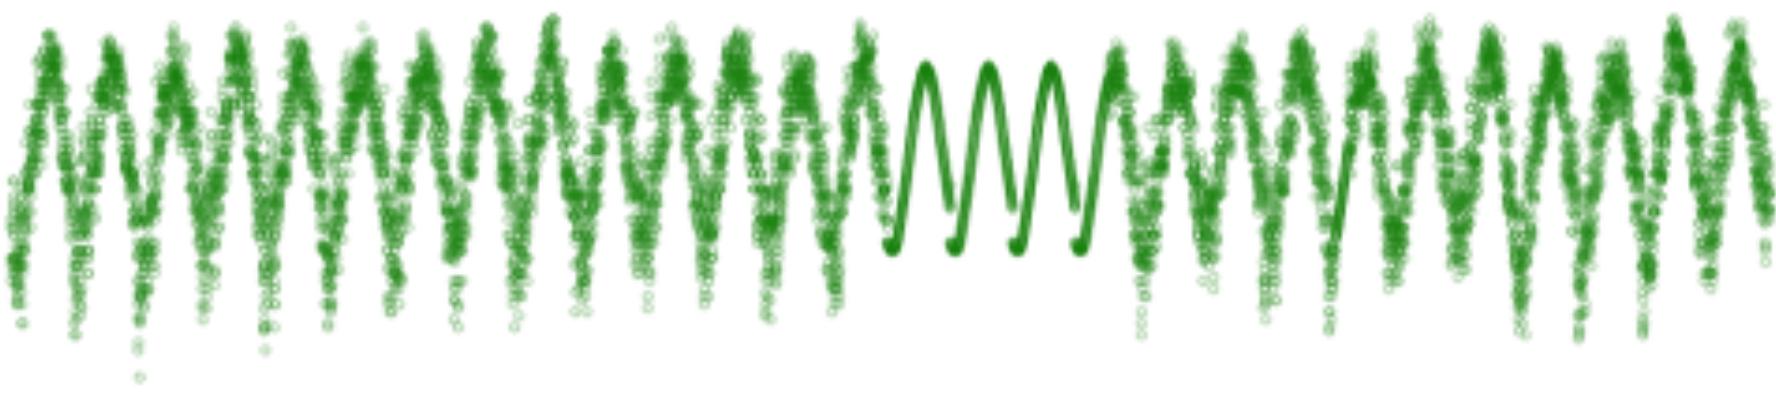

Obama spokesman replied:

problem with pols, especially as Mr. Romney that in crunch time, reverts to No. 1. Exit polls show that 9% of the electorate who to vote for just before Tuesday; and among them, 42% said Mr. Obama's Sandy response—the tie photo-op—was a factor. Of those, 10% voted for Mr. Obama. Mr. Christie is one of the politico who is doing well.

Yes, Republicans across two presidents that there are some issues how crudely they issue like illegal immigration. Blowing up the White House if you thought day's results
